

Blinkit Sales Dashboard - Key Insights Report

Power BI portfolio analysis based on the BlinkIT grocery dataset. The dashboard summarizes sales performance, product mix, outlet characteristics, location trends, and customer ratings.

Total Sales	Average Sales	Number of Items	Average Rating
\$1.20M	\$141	8,523	3.9 / 5

Key Insights

- **Product mix:** Low Fat products generate approximately **\$776K (64.6%)** of sales, compared with about **\$425K (35.4%)** from Regular products. This makes Low Fat the dominant sales segment in the dataset.
- **Top categories:** **Fruits & Vegetables** and **Snack Foods** are the strongest categories at roughly **\$0.18M each**. Household (~\$0.14M), Frozen Foods (~\$0.12M), and Dairy (~\$0.10M) are also major contributors.
- **Outlet type:** **Supermarket Type 1** clearly leads with approximately **\$787.6K** in sales, representing around two-thirds of total revenue. This format is the main sales engine in the dashboard.
- **Outlet size:** **Medium-sized outlets** contribute the largest share at about **\$507.9K (42.3%)**, followed by Small outlets at roughly \$444.8K and High-size outlets at about \$249K.
- **Location:** **Tier 3** locations generate the highest sales at approximately **\$472.1K**, ahead of Tier 2 (~\$393.2K) and Tier 1 (~\$336.4K), indicating stronger sales performance outside the highest-tier locations in this dataset.
- **Time trend:** Sales by outlet establishment year peak in **2018 at about \$205K**, suggesting that outlet cohort deserves deeper investigation to identify the factors behind its stronger performance.
- **Customer experience:** The average rating of **3.9/5** reflects generally positive satisfaction, but also leaves measurable room to improve service quality and customer experience.

Recommended Actions

- Protect availability and promotional visibility for the highest-selling product categories.
- Benchmark Supermarket Type 1 operations and apply successful practices to lower-performing outlet formats.
- Investigate Tier 3 demand patterns before making location or expansion decisions.
- Study the 2018 outlet cohort to identify repeatable drivers of stronger sales.
- Use ratings and feedback to target an average customer rating above 4.0.

Conclusion: The dashboard shows that sales are concentrated around a few strong product categories, Supermarket Type 1 outlets, medium-sized stores, and Tier 3 locations. The clearest opportunity is to combine these high-performing patterns with stronger customer-experience initiatives and targeted inventory planning.

Portfolio note: This analysis uses the project dataset for educational purposes and should not be interpreted as current official Blinkit business performance.
